

Mrs Geo. Grandy
Whittier

Ely Station
R. D. No 2 Box 76.

Cal.

Friday 2 P. M.

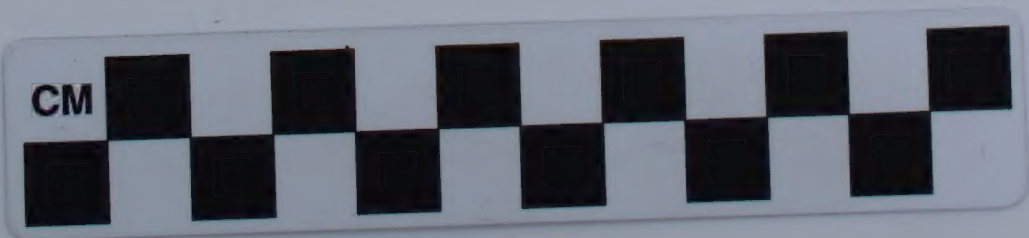

Feb. 2 - 1912.

Dear Cousin and all -

It just came to me that I had promised to send you the Bordianx receipt, so will try to get it down in time for the carrier before he gets back.

Alma has been reading it to me just now and I thought it would all hold on the back sheet of this, but as it did not had to write some of it on the other side, so you see what an awkward

CM

looking thing it is, but if you
cannot make it out come over.

I suppose your neighbors over there
all know how to make it.

we got home all right
in time to feed the chickens Sunday
even. and are pretty well. It is so
hot just like summer. I have been
irrigating a part of the creek and
every thing is dry and needs wetting.
Hope Geo. did not get sick with his wet
feet. I must close with Love to all.
Ella.

Bordeaux Mixture.

Copper sulphate 4 lbs.

Fresh lime 4 lbs.

Water to make 50 gallons

To dissolve the copper

sulphate readily - it should be placed in a coarse cloth bag and suspended in the water so that the sulphate is just covered.

Fresh lime should be dissolved in another vessel using only a small amount of water at first - adding more as the process of dissolving progresses. Then dilute to 2 1/2 gallons. The copper sulphate solution and the milk of lime should then be poured together in a third vessel - which may be the spray barrel.

Strain when pouring.
It should be a sky-blue
color (not green)
